

UNCOMPLICATED FIREWALL

INSTALLATION:

UFW should already be installed, check with command:

```
sudo ufw status verbose
```

If not install:

```
sudo apt-get install ufw
```

SET UP DEFAULT POLICIES

If you're just getting started with your firewall, the first rules to define are your default policies.

To set the defaults used by UFW, use these commands:

```
sudo ufw default deny incoming  
sudo ufw default allow outgoing
```

Add the Rules:

```
sudo ufw allow ssh && sudo ufw allow http && sudo ufw allow https
```

To enable UFW

```
sudo ufw enable
```

Reboot Server and check rules after reboot as per lectures.

IMPORTANT NOTICE

Copying and then pasting commands from a pdf can produce errors when pasting the commands into your terminal emulator.

Confirm the accuracy & correctness of the command before pressing enter.
